CODE BASICS

THE BOOTCAMP YOU DESERVE

codebasics.io

CODEBASICS STORY

In 2016, **Dhaval Patel,** the founder of codebasics, created the **'codebasics'** YouTube channel to share his knowledge as a means to gain mental peace during a significant health struggle. He discovered his passion for teaching and realised his unique ability to simplify complex topics. The love and blessings from thousands of students started to heal his health issues. This transformative experience soon became his life's purpose and even led him to consider leaving his lucrative job at Bloomberg, New York.

In 2020, one of Dhaval's subscribers, **Hemanand Vadivel, a data analytics expert** working in Europe, wished to contribute to the codebasics community as a 'payback' for what he learned from the codebasics channel. In 2021, Hemanand began creating impactful videos for codebasics, and it helped him heal from the trauma of losing family members to Covid-19. Seeing their shared values, Dhaval proposed a collaboration: creating the best, most affordable Power BI course on the planet.

JUNE 2022

After six months of dedicated collaboration, they released the Power BI course in June 2022, which was met with overwhelming positivity. By this time, both Dhaval and Hemanand had already left their high-paying jobs to create 'codebasics' as a full-time learning tech company. They made this decision after discovering their 'Ikigai', their true purpose: to make a meaningful impact through education, without any gimmicks.

In the era of commoditized education, where millions of courses are offered for profit but lack true value, Dhaval and Hemanand prioritized providing authentic, job-relevant learning experiences with honest pricing. Besides job-related affordable courses, codebasics offers high-quality free content and conducts several initiatives to support aspirants including mothers returning to work. This embodies their core vision of providing authentic job-related learning experiences to everyone, irrespective of their financial condition.

MAY 2024

Codebasics has more than

1 Million+ learners

in their community and strongly marching forward with a vision to unleash at least

5 Million+ potentials by 2025.

YOUR TEACHERS ARE INDUSTRY EXPERTS

Dhaval Patel

**Data Entrepreneur (12+ Years),
YouTuber,
Ex - Bloomberg, NVIDIA**

I have 17 years of experience in Programming and Data Science working for big tech companies like NVIDIA and Bloomberg. I also run a famous YouTube channel called Codebasics where I pursue my passion for teaching.

Hemanand Vadivel

**Ex- Data Analytics Manager,
8+ Years in Europe, Microsoft Certified,
Certified Supply Chain Professional**

I'm a Mechanical Engineer who transitioned to a full-time Data & Analytics Manager in the UK & Germany. I have delivered 30+ analytics projects over 15+ countries and trained professionals at different levels to equip them with valuable analytics skills.

HOW WE TEACH

Learn

Learn from the industry experts and the YouTuber, Dhaval Patel who is loved and known for his simple explanations.

With simple explanations, project-based learning, and real-world business context, we help learners enjoy a comprehensive learning experience that stays with them for a lifetime.

Engage

Our courses have a higher completion rate than average for a reason.

With cinematic storytelling, immersive visual effects, and relatable examples, we ensure that learning remains effective, impactful, and engaging!

Get Challenged

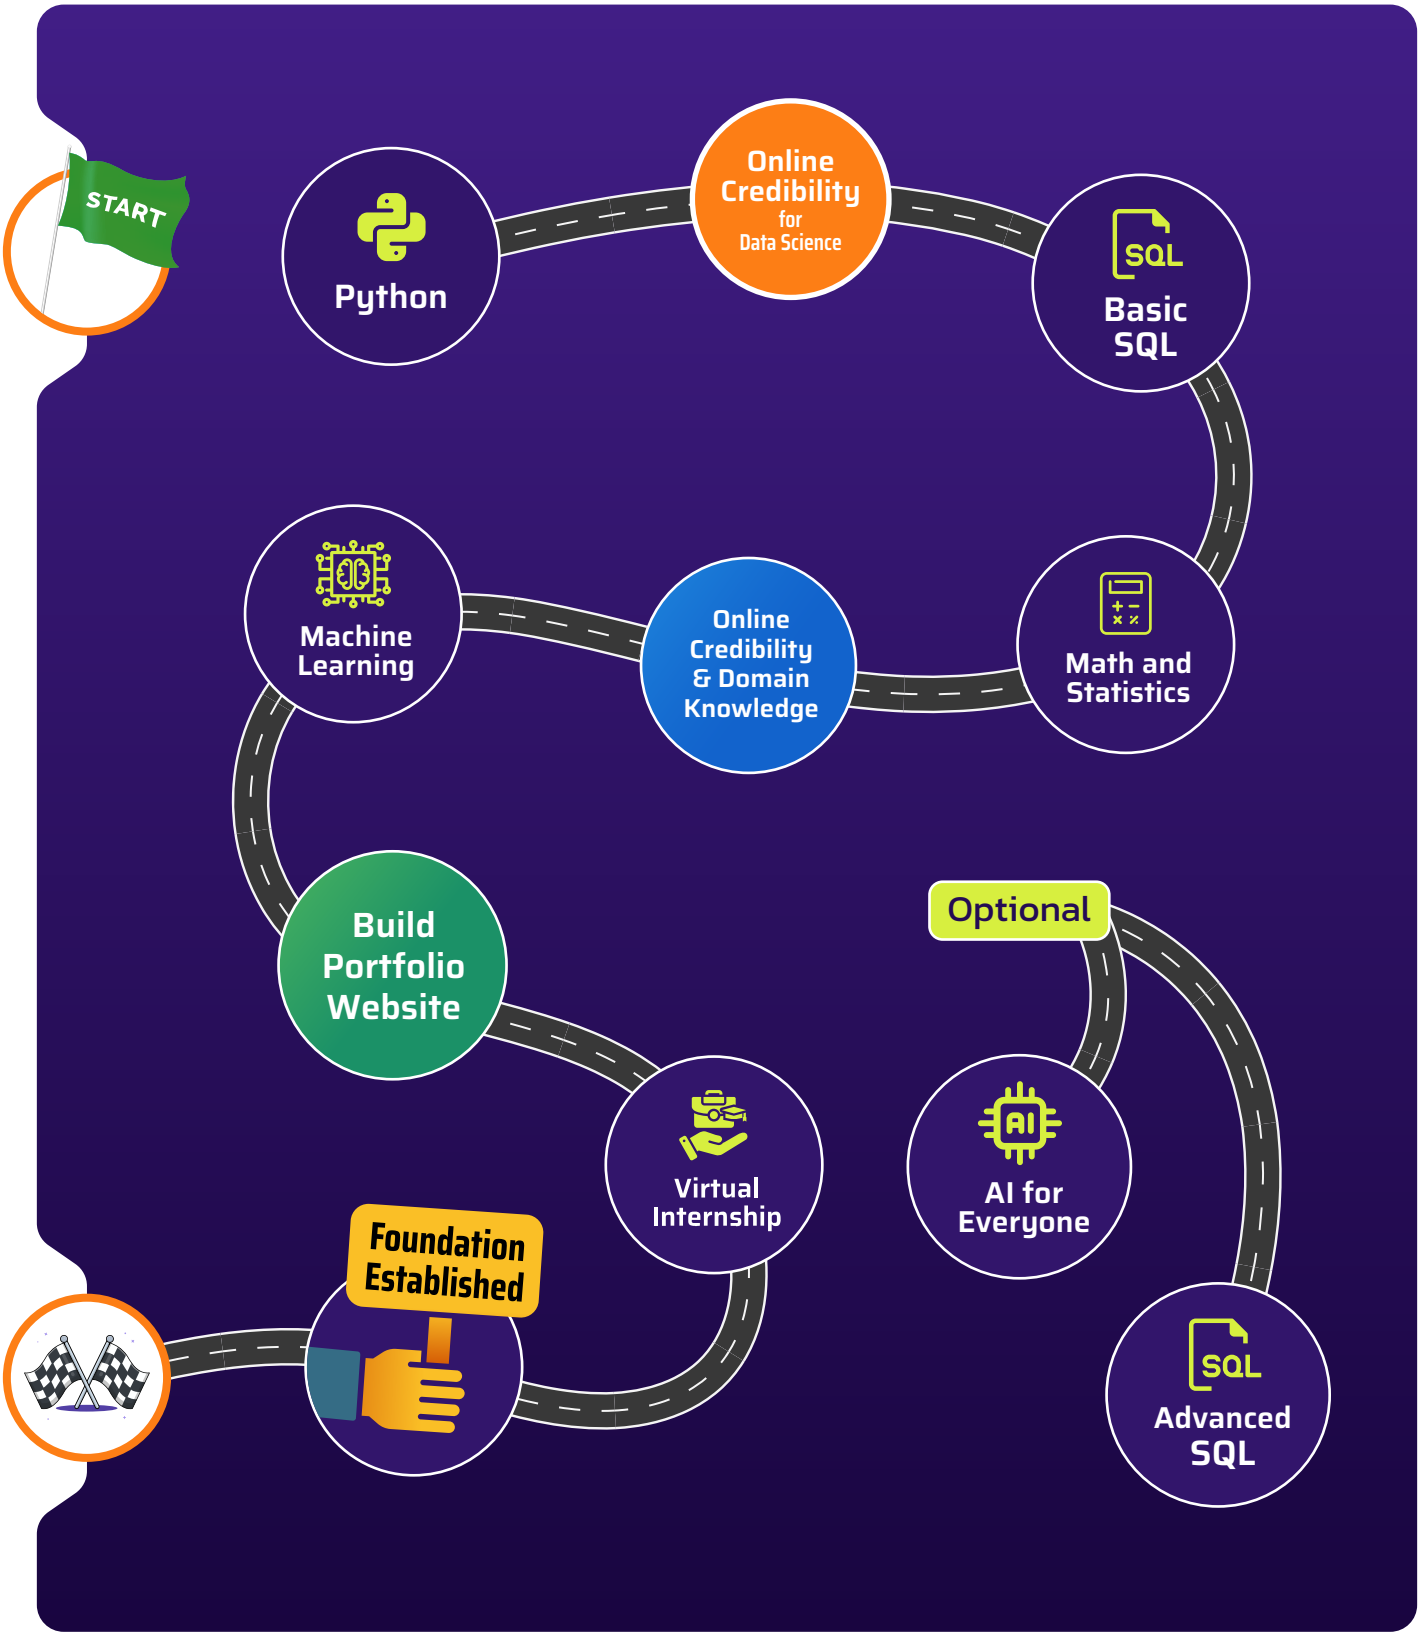

Learning technology is like learning swimming - you can truly learn it only when you practice. That's why we offer a range of challenging quizzes and exercises that help learners apply what they have learned.

Get Job Ready

The course instructors being hiring managers for many years in big tech companies, they know what it takes to be truly job ready.

From resume-project challenges to building online credibility, we cover various aspects of job readiness. With practical exercises, industry-relevant content, our learners get access to different tools they need to get job-ready!

DATA SCIENCE FOUNDATION BOOTCAMP

WHY THIS IS THE MOST EFFECTIVE BOOTCAMP ON THIS PLANET

- We offer unlimited chat support for doubt clearing through Discord.
- The projects you will be working on will be related to Food & Beverages, Finance, Healthcare, Banking, Supply Chain Analytics and more will be added in the future.
- We provide Virtual Internship, Project Portfolio Website and Building Online Credibility.
- You will experience highly engaging content that provides a cinematic feel, real-world business practice problems, and interactive business meetings.
- In this bootcamp, you won't be working on toy datasets. Instead, you'll tackle complex datasets used by real companies, with millions of records.
- 100% refund within 30 days and pay the difference feature.

PYTHON

BEGINNER TO ADVANCED FOR DATA PROFESSIONALS

This project-based learning course will teach Python through hands-on experience with two real-world projects: (1) Data analysis in the hospitality domain and (2) Building an expense tracking system. It is designed for both complete beginners with no prior coding experience and those with some Python knowledge looking to enhance their skills. The course is taught by an industry expert with over 14 years of experience at leading tech companies such as Nvidia and Bloomberg.

5710+ Learners | **4.8** Rating

RB **Rhytham Bajaj**

Rupali Sherekar
Computer Science Professor venturing into analytics

The entire course is wonderful. Everything is mapped to real world problems. Was specially excited to do the projects and I must say completing them was s satisfying. Thanks Dhawal Patel Sir, you have very simple ways of explaining complex topics. Was fulfilling learning experience. Highly recommended for beginners as well as intermediate learners.

★★★★★

SC **Shubham Chaurasia**
Software Engineer

There are numerous Python tutorials available for beginners, but they often contain extensive content and lack live project implementations. However, this course was refreshingly concise. As a MEAN stack developer, I swiftly acquired the knowledge thanks to Mr. Dhaval, who made learning through this tutorial remarkably straightforward. The projects were based on real-world examples, making it ideal for those who prefer to learn by doing. I highly recommend enrolling in this course if you enjoy practical learning experiences.

SYLLABUS

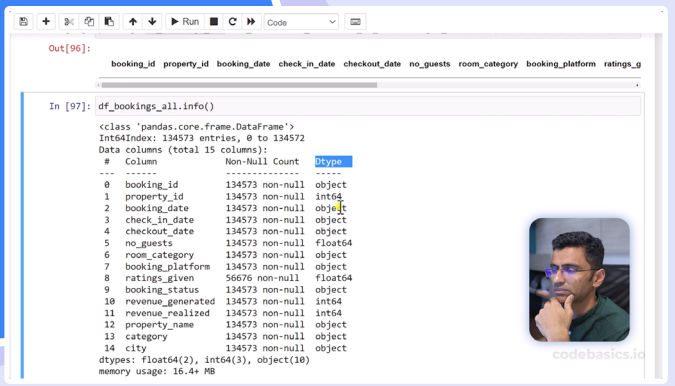

- Python Installation - Windows
- Python Installation - Linux
- Python Installation - Mac
- Variables
- Numbers
- Strings
- Lists
- Install Pycharm
- If Condition
- For Loop
- Functions
- Dictionary and Tuples
- Modules and Pip
- File Handling
- Classes and Objects
- Operator Overloading
- Inheritance
- Exception Handling
- Main Function
- Numpy Introduction and Benefits
- Basic Operations
- Matrix Operations
- Slicing, Stacking
- Pandas Introduction and Installation
- Dataframe Basics
- Read, Write Excel and CSV Files
- Handle NA values
- Group By
- Concat and Merge
- Data Visualization Using Matplotlib and Seaborn
- Data Exploration
- Data Cleaning
- Data Transformation
- Insights Generation
- Set and Frozenset
- Lists, Dict and Set Comprehensions
- Code Debugging Using PyCharm
- Working with JSON
- Generators and Iterators
- Decorators
- API
- Calling APIs with request Package
- Building APIs with FastAPI
- Automated Testing with Pytest
- Data Validation with Pydantic
- Database CRUD Operations
- Streamlit Introduction (Frontend)
- Analytics: Backend (FastAPI) & Frontend (Streamlit)

BUSINESS PROJECTS

01 HOSPITALITY DOMAIN DATA ANALYSIS

PYTHON

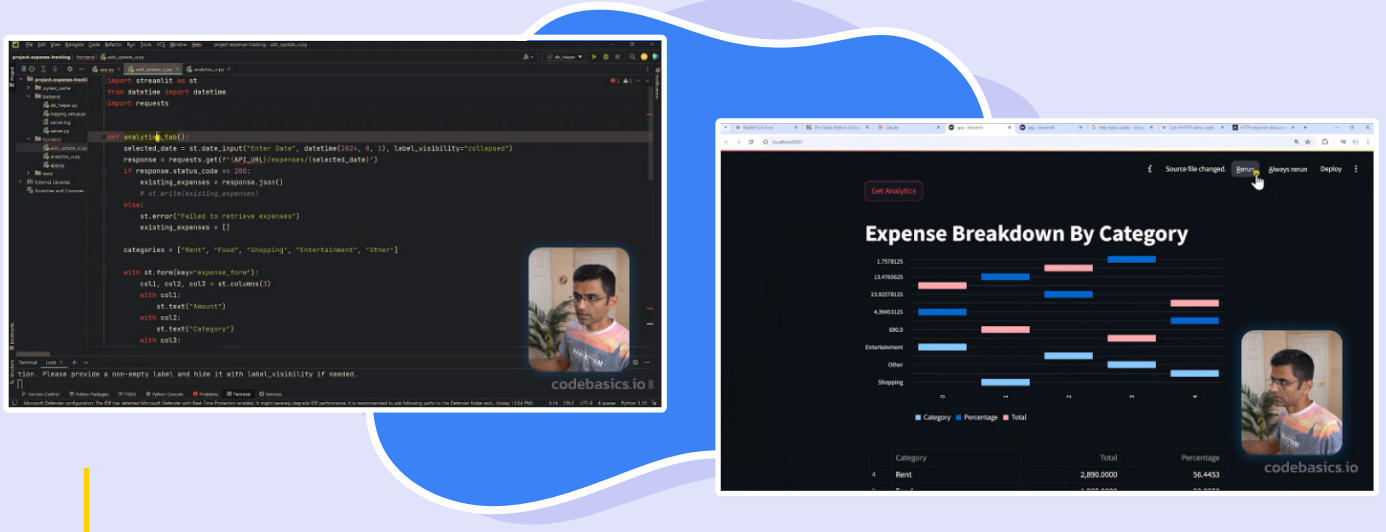

By completing this project, you will:

- ☑ Gain deep domain knowledge in the hotel industry, specifically in data analysis for operations, customer behaviour, revenue management, and market trends.
- ☑ Acquire essential technical skills using Python's Pandas library, including data cleaning, transformation, EDA, statistical analysis, and visualization.
- ☑ Recognize the high relevance of data-driven insights in today's business world for making informed decisions, optimizing operations, and enhancing customer experiences, not just in the hotel industry but across various sectors.

02 EXPENSE TRACKING SYSTEM — PYTHON

By completing this project, you will:

- ☑ Develop practical knowledge of expense management systems by building an application that tracks and analyses day-to-day expenses, such as rent, shopping, and food, providing users with a comprehensive view of their spending habits.
- ☑ Master key technical skills, including Python basics, database interactions with MySQL, backend development using FastAPI, and frontend design using the Streamlit framework, gaining end-to-end application development experience.
- ☑ Understand the value of analytics in financial decision-making by implementing features like category-wise and month-wise expense breakdowns, making this project relevant for aspiring software engineers, data scientists, and data analysts.

SQL

BEGINNER TO ADVANCED FOR DATA PROFESSIONALS

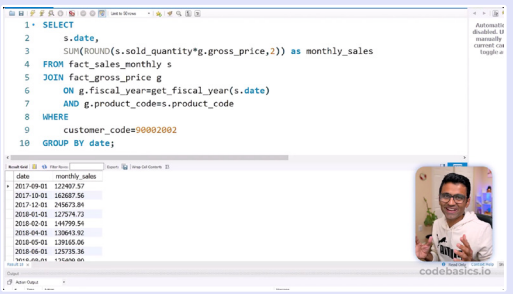

Beginners to advanced course for those preparing for a data career (data analyst, data scientist, or data engineer). This course is carefully curated to **simulate real-time organizational experience** to prepare you for the current job market and at the same time provides you with an ultimate learning experience through a **storytelling mode** that you would see in movies.

7420+ Learners | **4.9** Rating

SYLLABUS

- Install MySQL: Windows
- Install MySQL: Linux, Mac
- Retrieve Data Using Text Query (SELECT, WHERE, DISTINCT, LIKE)
- Retrieve Data Using Numeric Query (BETWEEN, IN, ORDER BY, LIMIT, OFFSET)
- Summary Analytics (MIN, MAX, AVG, GROUP BY)
- HAVING Clause
- Calculated Columns (IF, CASE, YEAR, CURYEAR)
- Joins (INNER, LEFT, RIGHT, FULL,CROSS)
- Join More Than Two Tables
- Subqueries
- ANY, ALL Operators
- Correlated Subquery
- Common Table Expression (CTE)
- CTE Benefits & Other Applications
- Entity Relationship Diagram (ERD)
- Database Normalization and Data Integrity
- Data Types: Numeric (INT, DECIMAL, FLOAT, DOUBLE)
- Data Types: String (VARCHAR, CHAR, ENUM)
- Data Types: Date, Time (DATETIME, DATE, TIME, YEAR, TIMESTAMP)
- Data Types: JSON, Spatial (JSON, GEOMETRY)
- Primary Key
- Foreign Key
- Entity Relationship Diagram - ERD
- INSERT, UPDATE, DELETE Statement
- ETL, Data Warehouse
- OLAP vs OLTP, Data Catalog
- Fact vs Dimension Table
- Star vs Snowflake Schema
- Data Import
- Simplified: What is Kanban?
- User-Defined Functions
- Stored Procedures
- Database Views
- Window Functions OVER Clause,ROW_NUMBER, RANK, DENSE_RANK
- Database Triggers
- Database Events
- User Accounts and Privileges
- Database Indexes

BUSINESS PROJECTS

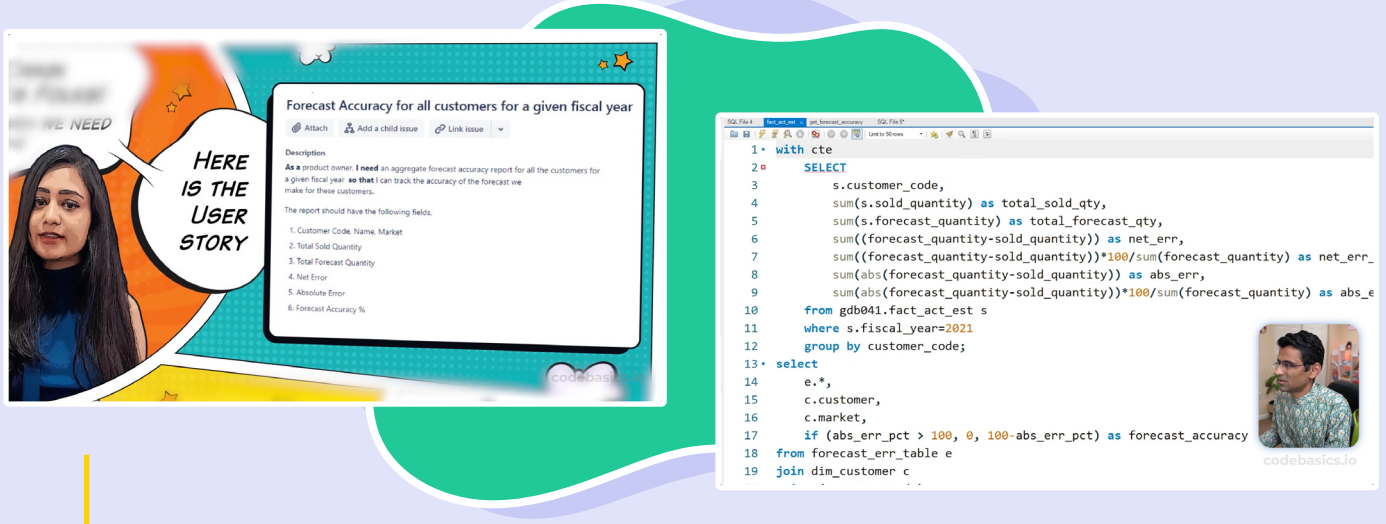

03 FINANCE AND TOP N INSIGHTS — SQL

- Gain domain knowledge in finance analytics for the consumer goods industry, focusing on generating reports for key metrics.
- Develop technical skills in efficient SQL querying, utilizing User-Defined Functions, creating and executing stored procedures, and leveraging views for data analysis.
- Understand the significance of data-driven financial decision-making in today's competitive business landscape.
- Drive sustainable growth by utilizing automated reporting solutions, such as stored procedures, to provide accurate and real-time information for financial analysis and decision-making.

04 SUPPLY CHAIN ANALYTICS AND MODEL OPTIMISATION

SQL

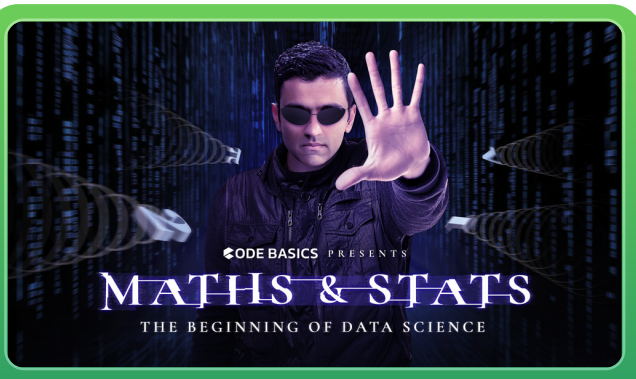

By completing this project, you will:

- ☑ Gain domain knowledge in supply chain analytics for the consumer goods industry, focusing on forecasting errors and absolute error calculation.
- ☑ Develop technical skills in creating helper tables, managing triggers, and optimizing query execution time.
- ☑ Understand the significance of accurate demand forecasting for consumer goods companies and how supply chain analytics can achieve it.
- ☑ Acquire practical experience through hands-on exercises and real-world examples in consumer goods supply chain analytics.

MATH AND STATISTICS

FOR AI, DATA SCIENCE

Learn the key concepts of Math and Statistics that lay the foundations for a strong data science career. This course is carefully curated to simulate real-time organizational experience to prepare you for the current job market and at the same time provides you with an ultimate learning experience through storytelling and intuitive explanations.

1150+ Learners | **5.0** Rating

Noble Sunil

Codebasics "Math and Statistics for Data Science" course is a hidden gem! Despite not taking math in 11th and 12th grade, I was able to grasp every concept effortlessly. This course gave me a fresh perspective on data science, and the best part? It's incredibly affordable. Whether you're a beginner or brushing up on your skills, this course is a must!

SYLLABUS

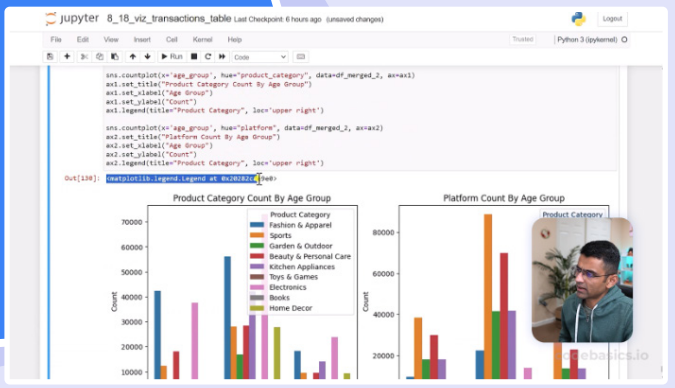

- [x] Types of Data
- [x] Pie Chart and Bar Chart
- [x] Histograms and Line Chart
- [x] Scatter and Bubble Plot
- [x] Univariate vs. Bivariate vs. Multivariate Analysis
- [x] Numpy Introduction and Benefits
- [x] Basic Operations
- [x] Matrix Operations
- [x] Slicing, Stacking
- [x] Descriptive vs. Inferential Statistics
- [x] Measures of Central Tendency: Mean, Median, Mode
- [x] Percentile
- [x] Measures of Dispersion: Range, IQR
- [x] Box or Whisker Plot
- [x] Outlier Treatment Using IQR and Box Plot
- [x] Measures of Dispersion: Variance and Standard Deviation
- [x] Correlation vs Causation
- [x] Probability Basics
- [x] Addition and Multiplication Rule
- [x] Conditional Probability and Bayes Theorem
- [x] Distribution
- [x] Skewness
- [x] Normal Distribution
- [x] Detect Outliers Using Normal Distribution
- [x] Z Score
- [x] Standard Normal Distribution (SND)
- [x] Kanban Project Management
- [x] Random Sampling & Sample Bias
- [x] The Law of Large Numbers
- [x] Central Limit Theorem, Sampling Distribution
- [x] Standard Error
- [x] Confidence Interval
- [x] Null vs Alternate Hypothesis
- [x] Z Test, Rejection Region
- [x] p-Value
- [x] Statistical Power & Effect Size
- [x] A/B Testing
- [x] A/B Testing Using Z Test
- [x] T-test
- [x] Chi-squared Distribution
- [x] Chi-squared Test of Goodness of Fit
- [x] Chi-squared Test of Independence

BUSINESS PROJECTS

05 ATLIQO BANK PROJECT

MATH AND STATISTICS

By completing this project, you will:

- ☑ Gain hands-on experience in the banking sector by working on a large-scale data analysis project aimed at identifying the target market for a new credit card launch, simulating real-life industry challenges with over 50,000 records.
- ☑ Master essential data analysis techniques, including data validation, cleaning, handling outliers, MySQL setup, and data visualization using Python, while performing critical tasks like credit score analysis, correlation studies, and hypothesis testing.
- ☑ Understand the role of A/B testing and statistical decision-making in marketing campaigns, providing insights into customer segmentation and campaign effectiveness, which are applicable across various industries.

MASTER MACHINE LEARNING FOR DATA SCIENCE & AI

BEGINNER TO ADVANCED

Learn Machine Learning from an AI entrepreneur with extensive industry experience and a popular YouTube channel (Codebasics) with 1 million subscribers. This course takes you from beginner to advanced levels, providing deep intuition on algorithms, engaging cinematic experiences, end-to-end projects, and hands-on coding practice. Designed for easy understanding, even for high school students, all at an affordable price.

SYLLABUS

- Introduction to Machine Learning
- Classification vs Regression
- Supervised vs Unsupervised Learning
- Simple Linear Regression
- Multiple Linear Regression
- Cost Function
- Derivatives and Partial Derivatives
- Chain Rule
- Gradient Descent
- Model Evaluation
- Data Preprocessing: One Hot Encoding
- Polynomial Regression
- Overfitting and Underfitting
- L1 and L2 Regularization
- Bias Variance Trade Off
- Introduction to Classification
- Logistic Regression: Binary Classification
- Model Evaluation: Accuracy, Precision and Recall, F1 Score, Confusion Matrix
- Logistic Regression: Multiclass Classification
- Cost Function: Log Loss
- Support Vector Machine (SVM)
- Data Pre-processing: Scaling
- Sklearn Pipeline
- Naive Bayes
- Decision Tree
- Handle Class Imbalance
- Introduction to Ensemble Learning
- Majority Voting, Average and Weighted Average
- Bagging
- Random Forest
- Boosting: AdaBoost
- Gradient Boosting
- XGBoost
- Model Evaluation: ROC Curve & AUC
- Cost Benefit Analysis Using ROC in Sklearn
- K Fold Cross Validation
- Stratified K Fold Cross Validation
- Hyperparameter Tuning
- 10 Stages of AI Project Lifecycle
- Requirements and Scope of Work (SOW)
- Data Collection, Data Cleaning & Exploratory Data Analysis
- Feature Engineering
- Model Selection & Training
- Model Fine Tuning
- Model Deployment
- Monitoring and Feedback Using ML Ops
- Variance Inflation Factor (VIF)
- K Means Clustering

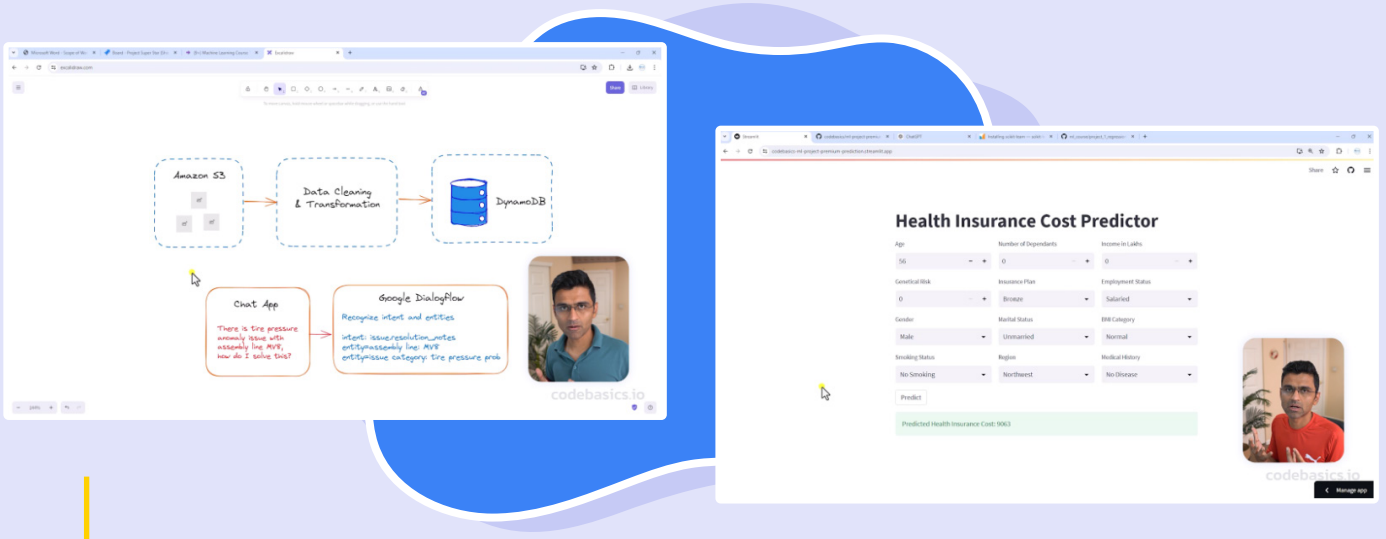

SYLLABUS

- Hierarchical Clustering
- DBSCAN
- ML Ops
- ML Flow
- Introduction & Basics of API
- Introduction to ML Cloud Platforms
- AWS Sagemaker
- Data Drift Detection Using PSI & CSI
- PSI & CSI: Practical Implementation

BUSINESS PROJECTS

06 HEALTHCARE PREMIUM PREDICTION (REGRESSION)

MACHINE LEARNING

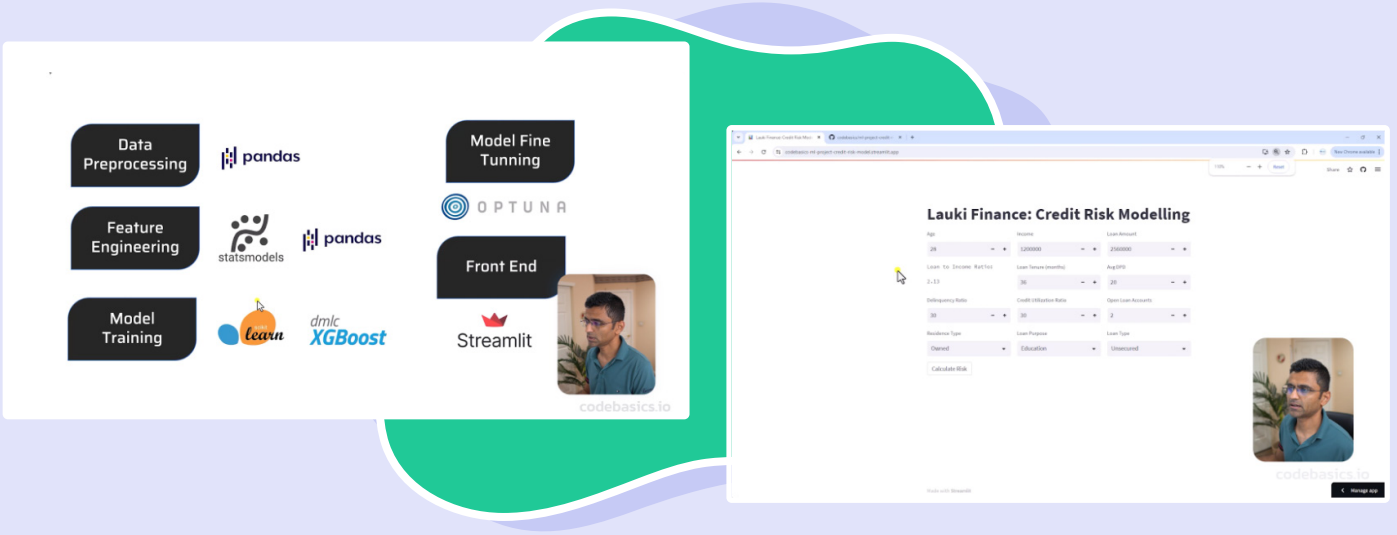

By completing this project, you will:

- ☑ Gain domain knowledge in the healthcare industry by predicting insurance premiums using machine learning regression models, covering real-world tasks like data collection, model training, and deployment.
- ☑ Develop advanced technical skills in data cleaning, exploratory data analysis (EDA), feature engineering, and regression model fine-tuning, achieving high accuracy while performing error analysis and segmentation.
- ☑ Understand the practical application of machine learning in predicting financial outcomes, and learning to build and deploy models using Python, Streamlit, and other tools for real-time decision-making across industries.

07 CREDIT RISK MODELLING (CLASSIFICATION)

MACHINE LEARNING

By completing this project, you will:

- ☑ Gain valuable insights into the financial domain, particularly non-banking financial companies (NBFCs) and credit approval processes, by developing a credit risk model to classify potential defaulters.
- ☑ Acquire technical expertise in data cleaning, exploratory data analysis (EDA), feature engineering (WOE/IV), and model training, with a focus on classification techniques, model fine-tuning using Optuna, and evaluation metrics like KS Statistic and Gini Coefficient.
- ☑ Learn how to deploy machine learning models by building a Streamlit app, delivering business presentations, and applying credit risk modelling principles across various financial sectors.

VIRTUAL INTERNSHIP

In our virtual Internship, you'll gain practical experience in Data Science foundations. You'll gain good knowledge in data cleaning, data validation, reporting, feature engineering, model deployment and client handling. You will also learn scrum project management and improve debugging skills. With a problem-solving mindset, you'll be ready to tackle any data challenge and make a meaningful impact.

Data Science Internship Offer

Dear **Kirandeep**,

We are pleased to inform you that you have been selected as a **Data Science Intern** at our organization. We welcome you to our team and are excited to have you onboard!

As a Data Science Intern, you will collaborate with our team of experienced professionals to develop predictive models and analyze data to help us make informed business decisions. Your work will be essential to our organization's success, and we are confident that you will make valuable contributions during your internship.

The internship will be conducted virtually, and we will provide you with all the necessary tools and resources to help you excel in your role. Please do not hesitate to reach out to us if you have any questions or concerns. We are here to support you and ensure that your virtual internship is a success.

Once again, congratulations on being selected for the Data Science Intern position. We look forward to working with you and wish you all the best during your internship.

Best regards,

Abhilasha Kashyap

CodeX Project: Streamlit App Development for Client Demo

Kirandeep!

We're now moving forward with an important step: **developing a Streamlit app**. Your task is to create an interactive app using the best-performing model from the modeling phase.

This app will be used to demo our pricing prediction solution to the client. A well-designed app will greatly impress the client and give them confidence in the solution we've developed.

To help you visualize the final product, I've attached a **demo file** that provides an idea of how the app should look and function. Please use it as a reference while building the Streamlit app.

Let me know if you have any questions during the development process, and I look forward to seeing the final product!

Best regards,

Hem
Head of AI/Data Science I AtliQ Technologies Pvt. Ltd.
Website: www.atliq.com

Customer Behavior Analysis

Kirandeep,

Following up on our call, our client, an e-commerce company, has provided us with a dataset containing various metrics tracking customer behavior, purchasing patterns, and cross-sell conversion rates. Your task is to analyze this data using **mathematical and statistical** concepts to provide insights that will help improve their marketing strategies.

The client has requested answers to key business questions. You may use any tool, such as Pandas, NumPy, statistical libraries like SciPy, Excel, etc., to complete the task.

Click on the "Download Files" button above to access all the files. Your specific task is described in `**client_requests.pdf**`. Be sure to check `**meta_data.txt**` for a thorough understanding of the dataset.

Feel free to ask your seniors for any questions!

Good luck with this task!

Best regards,

Hem
Head of AI/Data Science I AtliQ Technologies Pvt. Ltd.
Website: www.atliq.com

BUSINESS PROJECTS

08 BEVERAGE PRICE RANGE PREDICTION

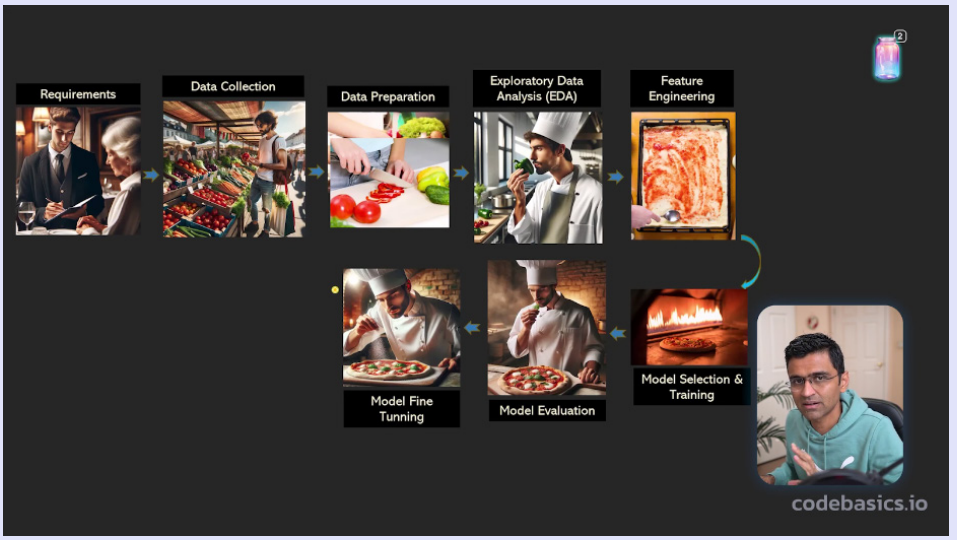

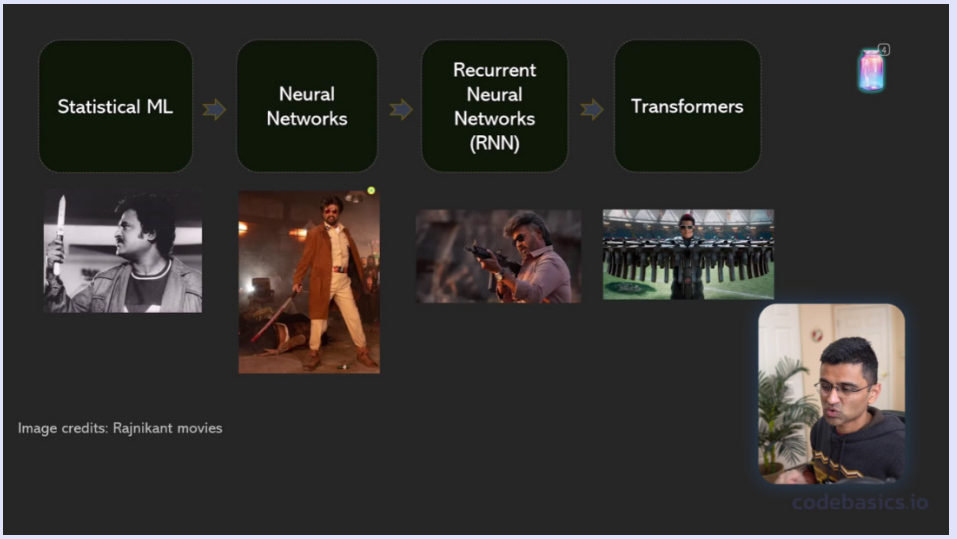

By completing this project, you will:

- ☑ Gain valuable insights into market pricing strategies by building a predictive model that forecasts optimal price ranges for beverages, helping businesses avoid overselling or underselling based on survey data.
- ☑ Develop essential technical skills in machine learning, including data cleaning, validation, feature engineering, and model deployment using Python, ensuring the creation of an accurate and reliable classification model.
- ☑ Understand how predictive models drive business growth and competitiveness by enabling data-driven pricing decisions, applicable across various sectors beyond the beverage industry.

AI FOR EVERYONE

"AI For Everyone" is an optional module designed as a follow-up to our Data Science Foundation Bootcamp. In this module, we'll explore AI topics like Deep Learning, Gen AI, NLP, and how AI is used in different industries. We won't be doing any coding in this module. Instead, we'll focus on giving you a solid understanding of these concepts. Coding will come later in our final bootcamp, where we'll dive deep into these topics. This module is your chance to get comfortable with AI without the pressure of coding—perfect for starting your journey into the more technical side later!

FAQs

01 What prior knowledge or skills do I need before enrolling in this bootcamp?

The only thing you need as a prerequisite is the passion and interest in learning AI and Data Science. Actual prerequisites such as Python, Math, and Statistics basics are all covered in this course.

02 How much coding/programming do I need to know to become a Data Scientist?

The first module in our bootcamp is the Python module where we teach everything from basics. You don't need to be an expert coder, but proficiency in data manipulation, visualization, and basic algorithms is essential.

03 What if I have an unrelated degree but want to pursue data science?

A computer science degree or an IT degree is not required. We have many success stories of folks from non-tech backgrounds successfully cracking into a data science career.

04 Can I enroll in the bootcamp if I have no background in mathematics or statistics?

Yes. In this bootcamp, we have a module on Math and statistics. This module designed for absolute beginners, simplifies learning Math and Statistics through project-based learning with a real dataset, focusing on practical data science applications.

05 What kind of support is available if I have questions during the bootcamp?

We have created every lecture of this bootcamp with the motive to explain everything in an easy-to-understand manner. While working on these lectures you could make mistakes in steps or have some doubts. You need to commit yourself to hold patience, make efforts & figure out the solution by googling in order to become truly job ready.

For any questions, that Google cannot answer or if you hit a wall - we got you covered!

You can join our active discord community, which is a dedicated platform to discuss & clear your doubts with fellow learners & mentors.

FAQs

06 Is there a community platform where I can interact with other students?

Yes, you'll be part of an active Discord community where you can interact, and learn from one another.

07 Are the lectures going to be LIVE?

To keep the bootcamp affordable, we have kept the lectures as self-paced videos that you can watch at your convenience. However, there will be monthly seminars and live discord community support.

08 Do you provide any Virtual Internship?

Yes, there is Virtual Internship, included in this BootCamp.

09 Can I expect to work on real-world datasets during the course?

Yes. In this bootcamp, we have a module on Math and statistics. This module designed for absolute beginners, simplifies learning Math and Statistics through project-based learning with a real dataset, focusing on practical data science applications.

10 Does this bootcamp provide lifetime access to the content?

Yes, this bootcamp will be available to you for a lifetime.

11 Will I receive a certificate upon completing the bootcamp?

Upon successfully completing each tool, you will receive a certificate. In total, you'll earn four individual certificates for Python, SQL, Maths & Statistics, and Machine Learning, as well as another one for completing the entire Bootcamp. Additionally, you'll also receive a letter of completion for the Virtual Internship.

12 How do I get the certificate?

You need to complete at least 70% of the course and score 70% or more on the final quiz. After completing the quiz, simply click "complete and get certificate" to download your certificate.

FAQs

13 Do you have an EMI (Installment) option?

Our website doesn't support an EMI option right now. But don't worry, you can still pay in installments by following these steps,

1. First buy the Python course.
2. After you have completed the Python course, buy the Math and Statistics course.
3. After completing the Math and Statistics course, buy the Bootcamp.

This way you will pay in 3 installments

Remember that the Bootcamp includes the same content from individual Python and Math and Statistics courses that you bought previously hence you will not lose anything in terms of learning in your Bootcamp curriculum.

Also, all the progress you made in these individual courses will be transferred to Bootcamp automatically."

14 Will I receive a certificate upon completing the bootcamp?

Upon successfully completing each tool, you will receive a certificate. In total, you'll earn four individual certificates for Python, SQL, Maths & Statistics, and Machine Learning, as well as another one for completing the entire Bootcamp. Additionally, you'll also receive a letter of completion for the Virtual Internship.

15 I have already purchased other Codebasics courses like SQL and Python. Will I have to pay the full amount to enroll in this bootcamp?

No, since both of these courses are part of this bootcamp, the amount you've already paid for the SQL and Python courses will be deducted from the bootcamp price.

16 I'm already enrolled in the Codebasics Data Analytics Bootcamp. Will I have to pay the full amount to enroll in this bootcamp?

No, since the SQL and Python courses in the Data Analytics Bootcamp are also part of this bootcamp, the price you've paid for those courses will be deducted from the bootcamp price.

FAQs

17 What if I don't like this bootcamp? Is there a refund policy?

Yes, we offer a no-questions-asked refund policy. No hidden conditions—if you request a refund within 30 days of enrollment, you will receive a 100% refund.

18 How can I request a refund?

Simply email us at info@codebasics.io with your name, course name, course purchase date, and the registered email ID you used on the Codebasics website. We will initiate the refund after verifying your details and eligibility according to our refund policy.

FROM FOUNDER'S DESK

Hello, I'm Dhaval Patel, and I want to share how and why I started the Codebasics YouTube channel. It all began during one of the darkest periods of my life. In **2011**, while working for Bloomberg, I was diagnosed with **Ulcerative colitis**, a painful autoimmune disease. Despite trying numerous treatments, my health continued to decline. By **2015**, I felt hopeless and **constantly in pain**.

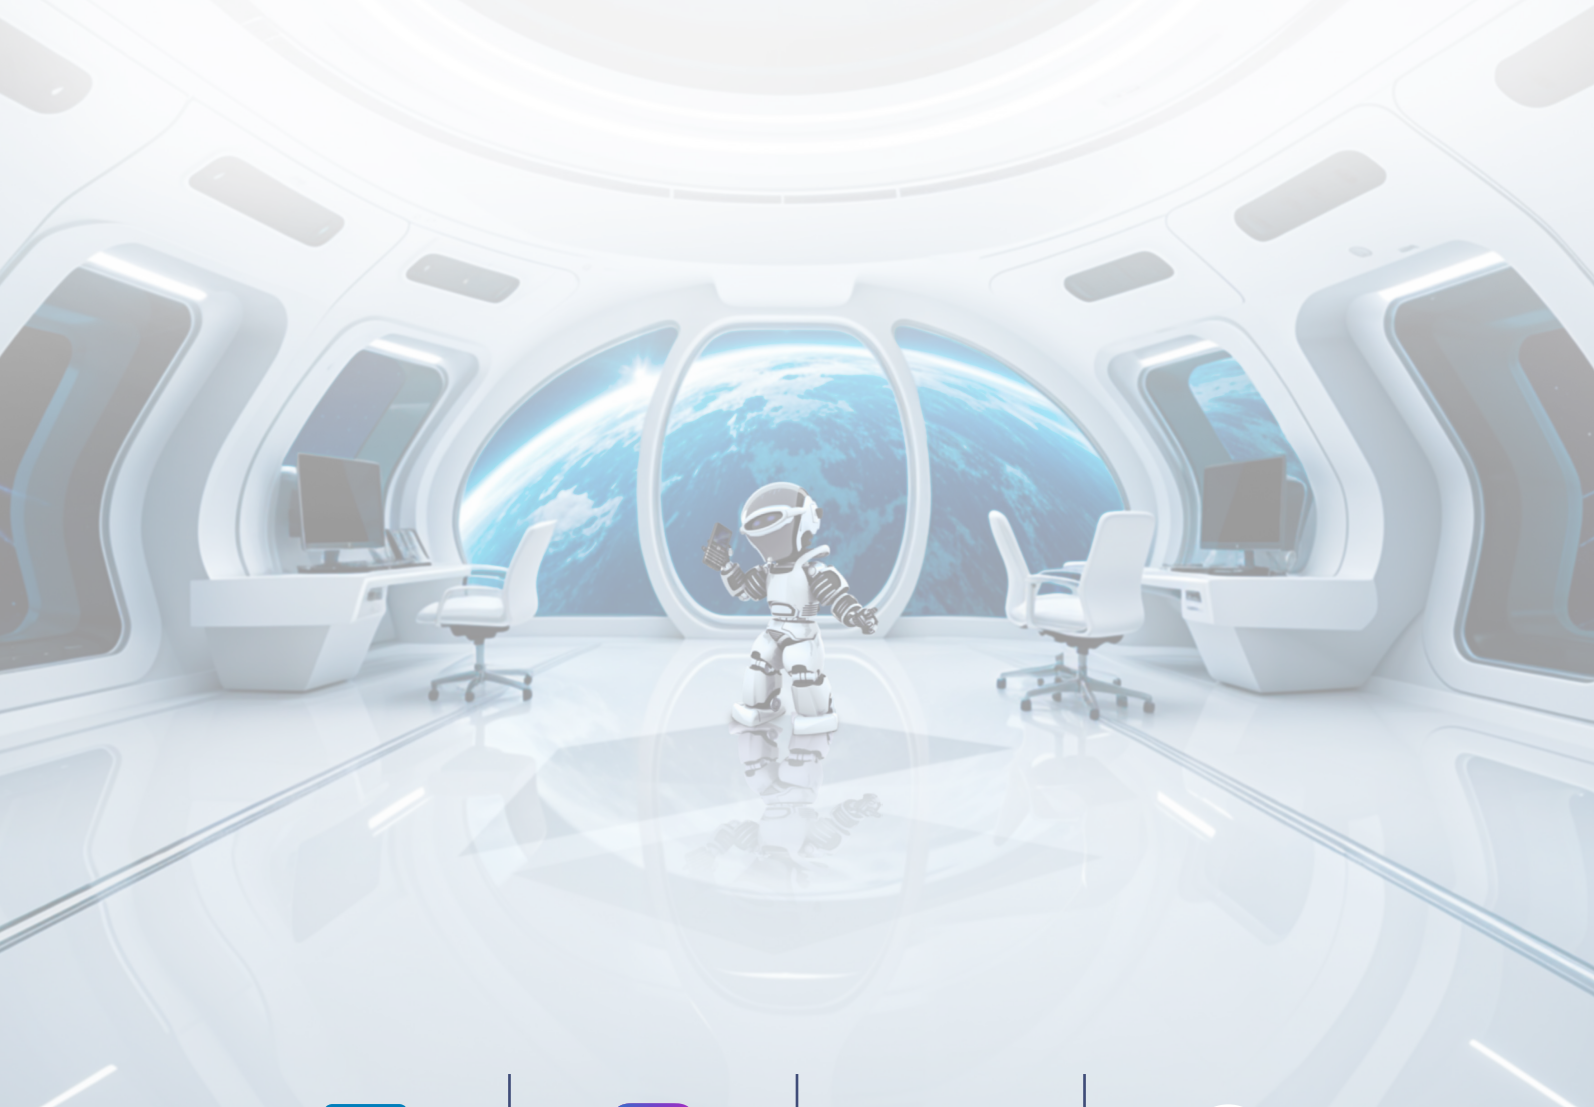

During this time, I stumbled upon a life-changing quote:

> ***"Life is 10% what happens to you and 90% how you react."***

Determined to shift my focus and find joy, I sought an activity that I enjoyed and that allowed me to help others. **Given my teaching abilities and inclination to share knowledge, I started the Codebasics YouTube channel.** Teaching became an outlet for me, enabling me to make a positive impact and share my expertise.

With each "Thank you" comment I received on my videos, my sense of purpose and will to live grew stronger. Over time, the Codebasics community flourished, and we now have over **1.11 Million+ subscribers** on YouTube and more than **35K+ paid learners** I've left my full-time job in the year 2022 to dedicate myself to Codebasics fully. My goal is to continue sharing my knowledge and creating a **positive impact** through this platform.

Use my story as to remind yourself that life is not always going to be easy but you can rise above that and make the world a better place to live for yourself and others.
